EDUCATION

Bachelor of Science, Business Analytics and Information Systems

University of South Florida (USF), Tampa, FL

May 2026

Dean's List

SKILLS

- Programming & Data Analysis: SQL, Python (Pandas, NumPy, AI implementations)
- Data Visualization: Power BI, Tableau, Excel, (Pivot Tables, VLOOKUP, Charts)
- Web Technologies: HTML, Java, React (API Integration)
- Project Management (Tools & Methods): Jira, Agile, Scrum, Slack

EXPERIENCE

Market Research Analyst Intern

August 2025 – Present

SOFWERX, Tampa, FL

- Conducted targeted market research on emerging technologies relevant to USSOCOM, evaluating technical reports and publications to assess capabilities, limitations, and strategic fit.
- Designed and implemented data collection systems, including online forms and a centralized database, to streamline research workflows and improve data accuracy.
- Performed quantitative analysis in Excel to identify trends and prioritize high-value opportunities, supporting data-driven decision-making.

Consultation Agent

May 2022 – Present

Best Buy, Brandon, FL

- Diagnosed and resolved computer issues by analyzing system data, performance logs, and error reports to identify patterns and implement solutions.
- Conducted in-depth consultations, gathering customer needs and system specifications to recommend technical solutions based on historical service data and product trends.
- Leveraged customer data and service trends to upsell and recommend services, contributing to revenue growth and enhancing customer experience.

Pharmacy Technician

July 2021 – April 2022

CVS, Dade City, FL

- Analyzed prescription transaction data to identify and resolve insurance claim discrepancies, reducing billing errors and ensuring accurate processing.
- Maintained and validated patient records in the database to ensure compliance with regulatory standards and improve data integrity.

PROJECTS

Superstore Tableau Project

December 2024

- Performed data analysis using Tableau, creating multiple visualizations including bar charts, trend lines, and a filled map to identify key insights and trends within the dataset.
- Developed an interactive dashboard that allowed dynamic data exploration, using filters and calculated fields to uncover patterns and support data-driven decision-making.

Covid-19 Python Project

December 2024

- Conducted an in-depth analysis of COVID-19 mortality data using Python, leveraging Pandas and Matplotlib for data cleaning, in-depth statistical examination, and visualizations to uncover key trends and patterns.
- Compiled findings into a comprehensive final report and presented key insights through a video presentation, effectively communicating data-driven conclusions and recommendations.

Tour Comparison App

May 2025

- Built an interactive React app that fetches live data from an API to display and compare tour packages.
- Implemented dynamic components and state management to allow users to expand/collapse details.

AI-Powered PC Builder and Educational Platform

May 2025-Present

- Planned a 20-week web platform using Angular, Django REST, PostgreSQL, and Amazon Bedrock for AI-driven PC build recommendations.
- Built architecture and monetization strategy with Docker, ETL pipelines, affiliate links, and AWS cloud services.
